

Table RQ10.2: Correlation of Evaluation Metrics with Deployment Risk
Risk-aware metrics better predict operational safety than mAP alone

Metric	Corr. with operational risk ($ \rho $) ↑	Sensitivity to shift ↑	Recommended use
mAP	1.00	0.11	Accuracy reporting
ECE	0.10	1.00	Confidence calibration
AURC	1.00	0.09	Uncertainty ranking quality
Risk@Coverage	1.00	0.27	Deployment-facing selection
