

Table RQ10.2: Metric Relevance Beyond mAP (Real Computed Values — 6 methods)
Green = valid correlation | Orange = near-zero variance (unstable) | Red = degenerate | Yellow = tautological

Metric	Corr. with Risk@0.90 ($ \rho $) ↑	Sensitivity (CV) ↑	Recommended use	Validity
mAP	0.93	0.031	Accuracy reporting	valid
ECE	0.27	0.283	Confidence calibration	valid
AURC	0.14	0.016	Uncertainty ranking quality	⚠ near-zero variance
Risk@Coverage	1.00	0.060	Deployment-facing selection	tautological
