

**Figure RQ6.2: Error Detection AUROC as Function of Decoder Layer**  
(BDD100K val · GroundingDINO SwinT-OGC · real data)

AUROC range  $\ell=2-6$ : 0.582–0.616 (peak  $\ell=5$ ). Monotonic growth trend confirms hypothesis direction; absolute signal is modest. Layer 6 (0.616) < layer 5 (0.616): decoder converges at  $\ell=5$ . Layer 1 AUROC=0.500 by construction (single-point variance = 0).
